BATTERSEA POWER STATION APARTMENT

MOST RECOGNISABLE BUILDING

The Grade II listed Power Station was erected in the 1930s to a design by Sir Giles Gilbert Scot. It is one of London's most recognisable buildings, held in affection, despite not being obviously beautiful. The apartments which will be within the existing facade between the Eastern and Western flanks of the building are designed by Michaelis Boyd Associates.

VISUALLY DRAMATIC INTERIOR

There will be more than 100 different types of apartments. There will be plenty of exposed brickwork, of course, and will feature other distressed materials.

Our floors were chosen to compliment this aesthetic. Michaelis Boyd describe the design as "refined industrial-authentic, highly tactile and visually dramatic".

EYE-CATCHING FLOORS

A chevron floor certainly adds visual drama to any space. Historically this parquet pattern first found favour during Haussmann's magnificent redevelopment of Paris in the mid 19th century. Now interior designers and architects are turning to this parquet style to create a modern floor with flair. Solid Floor offers chevron in a variety of sizes and colours.

OAK ENGRAIN

Oak end grain blocks show off the timber's subtle grain and natural colour variations.

OAK CHEVRON

Chevron offers a refined classic look, available in 45 and 60° angles.
